

Announcement: August 2010 - ArcelorMittal Steelton PA Plant Receives a New Paling CTS150 Transporter

Paling Transporter is pleased to announce ArcelorMittal Steelton PA recently took delivery of a new model CTS150 heavy transporter to add to its fleet of 4 Paling units in service since 1995.

ArcelorMittal is the world's largest steel producer. It acquired the plant from International Steel Group (formerly Bethlehem Steel) in 2006.

The Paling Continuous Transport System "CTS" has for over two decades been delivering safe, efficient, cost effective handling of steel mill products and upstream processes.

The Steelton plant utilizes the transporters in scrap handling, billets, bars rails and structural products handling within the EAF steelmaking and rolling operations.

Operational costs and service delivery performance are even more critical now due the recent steel market and economic recessions. Paling's unique design, construction and mechanical systems provide the durability and cost effectiveness required.

Paling Transporter Ltd. is a 100% Canadian owned, world class manufacturer of industrial self propelled heavy lift transporters, slag carriers and forklift trucks ranging in lift capacities of 25 to 350 tons. Primary traditional markets have been steel industries, oil producers and other heavy industries in Canada, USA, Europe and the Middle East.
