

PALING LIFT TRUCK - CHOSEN FOR MOST DEMANDING APPLICATION IN INTEGRATED STEEL MILL

Monday, 16 May 2005

This application required several features in order to provide a safe working environment. From programmable electronic controllers to bulletproof safety glass, Paling manufactured this equipment to the specific needs of their client.

Quadra Industries Services Inc was recently looking to acquire a 90,000 lbs forklift as part of their new innovative cryogenic process that was being installed at a major Hamilton industrial manufacturer. As this installation would be their showpiece for other customers to view this process, the first of its kind in the world, it was important that the equipment they chose be of the highest possible quality. After an extensive review of the potential suppliers, the decision was made to partner with Paling Transporter Ltd, for the design and supply of the equipment.

Quadra Industrial Services President Brian Wood stated, "The decision to partner with Paling was based on their reputation for building world class equipment, their design capabilities and their willingness to work with us to build exactly the machine that we required. The flexibility shown by Paling during the design stage was essential to the success of the project as with this being the first installation worldwide, our requirements and needs changed several times during the equipment design stage. The machine that Paling supplied meets all our requirements and future requirements".

Supplying our customers with equipment that exceeds their expectations is our mission. At Paling, the customer's dreams are the foundation on which our equipment is built. Let Paling design and build on your imagination and watch the equipment of your dreams become a reality.
