

September 2008 -Tube City IMS Takes Delivery of Two 150 Ton Heavy Transporters from Paling Transporter Ltd.

Tube City IMS, LLC, a leading service provider to steel mills and foundries throughout the world, demands that its steel mill handling equipment be safe, efficient and cost-effective.

When Tube City IMS began providing material handling services to V&M Star, a major Youngstown, OH, steel producer specializing in high quality steel tubes and pipe, Tube City IMS conducted an extensive bid process and thorough analysis to determine the safest, most efficient and cost-effective equipment in the marketplace.

After months of exhaustive study and testing, Tube City IMS awarded the contract to Paling Transporter Ltd. based on its safe, efficient design, competitive investment, quality and worldwide reputation in this material handling technology.

The Paling Transporter Continuous Transport System (CTS) involves standardized pallets adapted to specific handling challenges. The staging of empty and loaded pallets allows transporters to handle multiple tasks.

User benefits include increased efficiency and utilization of handling equipment, lower total material handling capital investment and operating costs.

Employee safety is paramount. Ergonomic designs and enhanced visibility with rear video display are just a few of the many safety features.

Power plants and drive systems are sourced from major heavy equipment component providers such as Caterpillar and Clark/Spicer.

The hydraulic lifting and steering system is electronically controlled with numerous safeguards, including failsafe and dangerous condition automatic lockouts.

The Multi-wheel drive and steering system is road friendly, as well as self-leveling for paved and rough road surfaces.

The units are specifically designed for the highest durability and reliability to meet the challenges of a steel mill's 24/7 continuous operations.

Paling Transporter has been manufacturing and delivering heavy transporters worldwide from its Hamilton, Ontario, Canada plant for more than two decades.

Other heavy equipment manufactured by Paling Transporter includes 25 – 60 ton Lift Trucks and a recently introduced high volume capacity molten Slag Transport System (STS) which is revolutionizing slag handling in steel making operations.

Paling Transporter's business values are: Safety, Innovation, Quality, Durability, Productivity and Profitability to the end user.

Paling Transporter is "Innovation in Lifting Profits."
